

Workshop on Air Pollution Control by Electrostatic Precipitation

In this workshop, carried out during August 26 & 27, 2008, Mr. Shyamal Ghosh discussed in details on the basics of Electrostatic Precipitation Technology.

He also carried out some case studies. The participants were highly benefited by the details given by Mr. Ghosh along with his partner Mr. Chakraborty on the recent developments of the dust particle changing concept so as to avoid loss of energy while achieving much better collection efficiency for critical dusts and for critical applications.

During interactions with the participants it was clearly understood that they are deeply involved in the continuous improvement of performance, where ever possible.

Incorporation of improved technology where ever available in mechanical as well as electrical aspects are always utilized to achieve all possible improvements in the environmental conditions even after meeting the required norms.
